

WHAT IS PRIVATE BROWSING?

iPhone®, **iPad®** and **iPod touch®** allow your kids to enable private browsing in Safari®. That means your kids can browse the web in secret. There will be no record of Internet history, cache, logins, searches, or anything else that would normally be visible.

WHEN PRIVATE BROWSING IS ENABLED

It only takes the flip of one little switch for your kids to turn on Private Browsing and hide their Internet use on Safari®.

WHAT TO DO

Parents who want accountability for their children and themselves must disable private browsing.

Replace Safari® with Covenant Eyes

See other side for a How-To Guide for Safe Browsing.

HOW-TO GUIDE FOR SAFE BROWSING

Maintain Accountability by removing the opportunity for private browsing.
Follow these easy steps to browse safely by turning off Safari®.

- 1** Go to www.covenanteyes.com to create an account.
For 30 days free use this code: mbb
- 2** Go to your device's App Store and download the Covenant Eyes App. This will be your new Internet browser.
- 3** Open "Settings" on your device and select "General."
- 4** Go to "Restrictions," select "Enable Restrictions," and enter a new restrictions passcode.
- 5** Turn off Safari®.
- 6** Turn off "Installing Apps" and "Deleting Apps." If you leave "Installing Apps" on, then other web browsers from the App Store can be downloaded, giving the user a way to circumvent accountability protections provided by Covenant Eyes.
- 7** Scroll down to "Allowed Content." We suggest you modify the options according to your values.

Congratulations! You have successfully protected your device!
